## Delivering Excellence in Cyber Security

At ZDL, we believe that effective risk management requires a holistic 360° approach. We take a comprehensive view of our clients' cyber security risks and provide quality services to address those risks.

Our approach to Total Security Management helps make our clients' infrastructure, applications and data more secure in the face of a continually evolving Threat Landscape. Our aim is to build a partnership with our clients, built on a mutual respect and understanding of each other's businesses. We become a part of our clients' team, a valued partner; an intrinsic part of their business.

ZDL's 4 Key Service Areas are designed to focus on our clients' cyber resilience journey. Our unique portfolio of services enables you to build an agile, responsive security infrastructure and strategy.

## Our Unique 360° Approach to Cyber Security Combines 4 Key Service Areas:

Ethical Hacking

Training

Compliance

Managed Services

## Why Work with ZDL?

Our depth and breadth of experience enables us to deliver high quality assignments that identify all areas of your IT security posture whilst also providing appropriate remediation and recommendations that move you up the security maturity curve.

- 360° approach
- The very best in industry talent, passionate about delivering proven results
- A security strategy, tailored to the unique requirements of your business
- An in depth technical approach
- 100% confidentiality
- Continuous Security improvement strategies

## What Makes the ZDL 360° Approach Different?

We implement a holistic approach to Total Security Management by bringing together the very best in consulting services. Our mantra is to deliver our work with Consistency, Quality and Passion.

### People

By employing the best skills in the market we constantly improve security awareness and remediate against security threats through client collaboration, security awareness training, consultancy and knowledge transfer.

### Process

We develop best practice through the consistent delivery of improved policies, procedures and processes; implementing risk management reviews, capability maturity assessments and strategic planning for business continuity and compliance. We are experts in UK & EU GDPR, NIST, ISO 27001 (Info Sec), ISO 27701 (Privacy), ISO 22301 (Business Continuity), PCI-DSS, Cyber Essentials, HIPPA, SOC I & II

### Technology

By combining our own market leading, in-house tool set with industry tools, open source techniques and leading-edge security solutions; we enable organisations to have greater visibility for Continuous Security Improvement and unrivalled defences against zero day attacks.

### Identifying Threats is Our Business

We strongly believe solely using automated tools to identify potential breaches and APTs will not provide a true picture of your security weaknesses. By applying our own in-house tools and the leading consultants in the field we find the vulnerabilities that other companies cannot. We lead the field in identifying and logging zero day vulnerabilities and persistent threats.

“ Smiths Detection operates in a fast moving industry where security is paramount for both ourselves and our clients. Therefore it was imperative we worked with an experienced organisation such as ZDL who could deliver complex assignments on time to our exacting standards. ZDL have been our preferred IT Security Consulting partner of choice for 4+ years, implementing diverse projects such as testing, source code reviews, and security education and training such as social engineering for all our key users. I would strongly recommend ZDL for organisations that are serious about improving their overall IT Security posture.

”
